

The 5-Point Code Review Checklist

1. Logic Correctness

Question: Does the code actually solve the ticket requirements?

- ☐ Meets acceptance criteria
- ☐ Edge cases handled
- ☐ Error handling implemented
- ☐ No off-by-one errors
- ☐ Boundary conditions tested

2. Code Readability

Question: Can a junior developer understand this?

- ☐ Variable names are descriptive
- ☐ Functions are single-purpose
- ☐ Magic numbers explained
- ☐ Comments where necessary (not obvious code)
- ☐ Consistent naming conventions

3. Side Effects & Dependencies

Question: Does this change break anything else?

- ☐ Check function callers
- ☐ Database schema changes?
- ☐ API contract changes?
- ☐ Breaking changes flagged
- ☐ Migration scripts included

4. Performance

Question: Are there unnecessary inefficiencies?

- ☐ No N+1 database queries
- ☐ Loops optimized
- ☐ Unnecessary API calls removed
- ☐ Memory leaks prevented

- ☐ Caching where appropriate

5. Tests

Question: Are there adequate tests?

- ☐ Unit tests added
- ☐ Integration tests if needed
- ☐ Test coverage increased
- ☐ Edge cases tested
- ☐ Negative cases tested
